TITLE: CollegeAssignment SubmissionTracker

GITHUB LINK: <https://github.com/rajishwari2006-star/TNSDC-FWD-DPI.git>

1. ABSTRACT

The College Assignment Submission Tracker is a web-based application developed to help faculty and students efficiently manage assignment submissions across multiple subjects. The system allows users to add assignments, track submission status, monitor pending and late submissions, and generate dashboard summaries. By providing a centralized platform for

assignment management, the application improves organization, reduces manual tracking efforts, and helps ensure timely submission of academic work

2. PROBLEM STATEMENT

Many college departments face difficulties in tracking assignment submissions manually. Faculty members often struggle to identify submitted, pending, and late assignments across different subjects. This process becomes time-consuming and prone to errors when handled using spreadsheets or paper records. The project aims to provide a simple and efficient solution for managing assignment submissions digitally

3. OBJECTIVES

- * Develop a user-friendly assignment tracking system.
- * Enable faculty to add and manage assignments.
- * Track assignment submission status as Submitted, Pending, or Late
- * Allow filtering of assignments by subject.
- * Provide dashboard summaries showing assignment statistics.
- * Improve monitoring and management of student submissions

4. PROJECT SCOPE

The application includes the following features:

- * Add assignment details such as title, subject, and due date.
- * Update submission status.
- * Filter assignments by subject.
- * Display dashboard summaries for submitted, pending, and late assignments.
- * View all assignment records in a structured format.

Future Enhancements:

- * Student login and authentication.
- * Email notifications and reminders.

- * Database integration for permanent storage.
- * Report generation and export options.

5. TECHNOLOGIES USED

- * HTML5 – Structure of the application.
- * CSS3 – Styling and responsive design.
- * JavaScript – Dynamic functionality and data handling.
- * React.js – Frontend user interface development.
- * Visual Studio Code – Development environment.
- * GitHub – Version control and proje

6. APPLICATION FLOW

1. The user opens the application dashboard.
2. Faculty enters assignment details including title, subject, and due date.
3. The system stores and displays the assignment information.
4. Faculty updates the submission status as Submitted, Pending, or Late.
5. Users can filter assignments based on subject.
6. The dashboard automatically updates summary counts.
7. All assignment records are displayed for easy monitoring and management.

7. KEY REACT CONCEPTS USED

- * Components – Used to divide the application into reusable UI sections.
- * JSX – Enables writing HTML-like syntax within JavaScript.
- * State Management (useState) – Stores assignment details and status updates.
- * Event Handling – Manages user actions such as adding and updating

assignments.

* Conditional Rendering – Displays different statuses and dashboard information dynamically.

* Props – Facilitates data sharing between components.

* List Rendering – Displays assignment records efficiently.

8. EXPECTED OUTPUT

College Assignment Submission Tracker

Track and Manage Student Assignment Submissions Efficiently

Add Assignment

Assignment Title Subject dd-mm-yyyy Submitted Add Assignment

Total Assignments 25

Submitted 15

Pending 7

Late 3

Assignment Records

Assignment Title	Subject	Due Date	Status
Angular Mini Project	Web Technology	20-06-2026	Submitted
Database Report	DBMS	25-06-2026	Pending
Software Testing Assignment	Testing	28-06-2026	Late

© 2026 College Assignment Submission Tracker

9. CHALLENGES FACED

- * Managing dynamic assignment data updates.
- * Implementing subject-based filtering efficiently.
- * Maintaining accurate dashboard counts.
- * Designing a responsive and user-friendly interface.

Solutions:

- * Used React state management for data handling.
- * Applied filtering logic using JavaScript functions.
- * Tested dashboard calculations thoroughly.
- * Implemented responsive CSS design.

10. LEARNING OUTCOMES

- * Understanding of React.js fundamentals.
- * Experience with component-based development.
- * Knowledge of state management and event handling.
- * Skills in creating interactive dashboards.
- * Improved problem-solving and debugging abilities.
- * Practical experience in web application development.

11. CONCLUSION

The College Assignment Submission Tracker successfully addresses the challenge of monitoring assignment submissions in educational institutions. The application provides an organized and efficient platform for managing

assignments, tracking submission statuses, and generating dashboard summaries. Through this project, an effective solution was developed to reduce manual effort, improve accuracy, and enhance academic management processes. The project also provided valuable hands-on experience in React-based web application development.
